

Universal Voltage GMT Fuse Panels

Power :: Multiple GMT Fuse Panel Configurations and Options

Overview

Amphenol GMT fuse panels include a comprehensive range of options and standard configurations to fit virtually any low-current power distribution application.

Each panel allows up to 60A or 100A input connections enabling increased power distribution for equipment. Panels support 20A maximum fuse positions to handle a wide range of equipment and universal operating voltage (± 24 to -48 VDC) which means they fit any network environment — from traditional central offices to customer premise and wireless applications.

Choose from 10- or 20-position panels. Individual fuses mount adjacent to each other in thermally isolated fuse holders.

Applications

- Wireless
- Central office
- Co-locate
- Remote sites
- Secondary distribution

Primary Benefits

- Universal voltage (± 24 to -48 VDC) enables standardization on a single part number for multiple voltages
- Bay alarm as standard feature for either major or minor alarms within the equipment rack
- Up to 20A fuses for distribution to a variety of network elements
- GMT fuse holders mounted for downward trip indication to provide easy identification and detection of blown fuses
- Staggered output terminal blocks facilitate “waterfall” cable management
- UL and NEBS compliant to ensure industry-standard safety and functional requirements
- Form C relay contacts provide reliable alarm connections
- Integrated designation pin holder for simple power identification
- Fail alarm LEDs clearly indicate fuse and power failures
- Clear, flame-retardant polycarbonate cover (94V-0) protects input and output power connectors and wiring from damage
